USING THE CSE FORMAT

Scientific Style and Format: The CSE Manual for Authors, Editors, and Publishers (7th ed.) is invaluable to authors, editors, publishers, students, translators, and science writers writing or publishing scientific material. General and scientific publication styles and formats for journals, books, and other types of publications are given in both American and British preferences. Thus, the manual is useful to authors submitting papers to both U.S. and international journals published in English and to settle disputes over international usage.

Copies of the CSE Manual (7th ed.) are available at the following locations:
- Evans Main Service Desk
- West Campus Library Reference Desk
- Medical Sciences Library Reserve Desk (WZ 345 S4164 2006)

REFERENCES IN TEXT

Three general systems for in-text references are widely used (with many variations) by editors and publishers of scientific literature. Each system has advantages and disadvantages (see pp. 491-497 of the CSE Manual).

Citation-sequence (C-S) system: Citations in the text, tables, and figure legends are numbered and listed in the sequence in which they are first cited. These numbers correspond to the references listed at the end of the document; subsequent citations to the same document use the same number as its initial citation.

Ex: Modern scientific nomenclature really began with Linnaeus in botany1, but other disciplines2,3 were not many years behind in developing various systems4-7 for nomenclature and symbolization.

Name-year (N-Y) system: Citations appearing in the text, tables, and figure legends consist of the author’s surname and the publication year. Complete citations are listed alphabetically at the end of the document.

Ex: By contrast, the several antisera that have been raised against Sp1, a defined RNA polymerase II transcription factor (Kadonaga 1986), stain exclusively the nucleus . . .

Citation-name (C-N) system: In this hybrid of C-S and N-Y systems, the end-reference list is completed and alphabetized by author and then by title, and the references are then numbered. Citations in the text, tables, and figure legends use the numbers corresponding to the references listed at the end of the document.

Ex: Modern scientific nomenclature really began with Linnaeus in botany13, but other disciplines2, 16 were not many years behind in developing various systems4-6,22 for nomenclature and symbolization.

GENERAL PRINCIPLES FOR FORMATTING END-REFERENCES

In the C-S and C-N systems, the general sequence of information in a reference is author name, title, and additional items (including year of publication) and references are the same in both systems. In the N-Y system, author names are followed by the year of publication; all the other items then follow in the same sequence (except for the year). For detailed guidelines on punctuation, capitalization, and abbreviation in reference citations, see Chapter 29 of the CSE Manual.

Author names with initials are recommended for reference lists. When there are 2-10 authors, all should be named; if more than 10 authors, list the first 10 followed by “et al.” or “and others”, unless the particular publisher specifies fewer or all. In article titles, only the first word and proper nouns and proper adjectives are capitalized. Obvious exceptions are capitalized abbreviations and symbols (e.g., HIV-1, DDAVP, pH), which should be reproduced as they appear in the original document. CSE does not recommend bold, underlining, or italics.
**Journal article (paginated by issue)**

Form of citation in text: (Kaine and Cowan 2011)

**Book with authors**

Form of citation in text: (Voet and Voet 1990)

**Book with editors**

Form of citation in text: (Gilman and others 1990) [or] (Gilman et al. 1990)

**Chapter in a book**

Form of citation in text: (Kuret and Murad 1990)

**Conference paper (from a proceedings without a separate title)**

Form of citation in text: (Kalter 1986)

**US Government-sponsored report issued by performing organization**

Form of citation in text: (Moray and Huey 1988)

**Nongovernment report**

Form of citation in text: (JHU 1979)

See handout entitled “Citing the Internet Using CSE Style” for more examples.
