

How to Upload Library Lesson to Canvas Course

STEP 1: If you do not see “SCORM” in your navigation menu, follow these steps to enable it:

- 1 Go to “Settings” and
- 2 Select “Navigation.”
- 3 Scroll down and when you see it click the menu and select “enable.”
- 4 Then save.

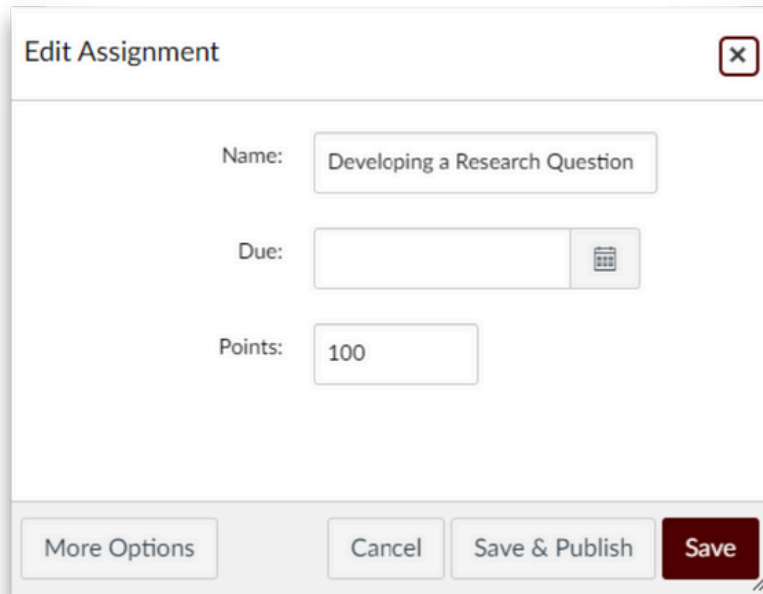

The screenshot shows the Canvas course settings interface. On the left is a navigation sidebar with items like Home, Announcements, Modules, Grades, Course Evaluations, SCORM, Accessibility Report, Library Reserves, Assignments, Discussions, Files, Pages, People, Quizzes, Rubrics, Outcomes, Collaborations, Syllabus, and Settings. An arrow labeled '1' points to the Settings item. The main content area has tabs for Course Details, Section, Navigation (circled with '2'), Apps, and Feature Options. Below the Navigation tab, there are two lists of items. The first list contains Home, Announcements, Modules, Grades, Course Evaluations, Accessibility Report, and Library Reserves. The second list contains AEFIS Tools, Assignments, Attendance, BETA Peerceptiv, Chat, Core Curriculum Assessment, Zoom Pro 1.3, Course Materials, SCORM (highlighted in yellow), and another item. An arrow labeled '3' points to the three-dot menu icon next to SCORM. A 'Save' button (circled with '4') is at the bottom left, and a '+ Enable' button is at the bottom right.

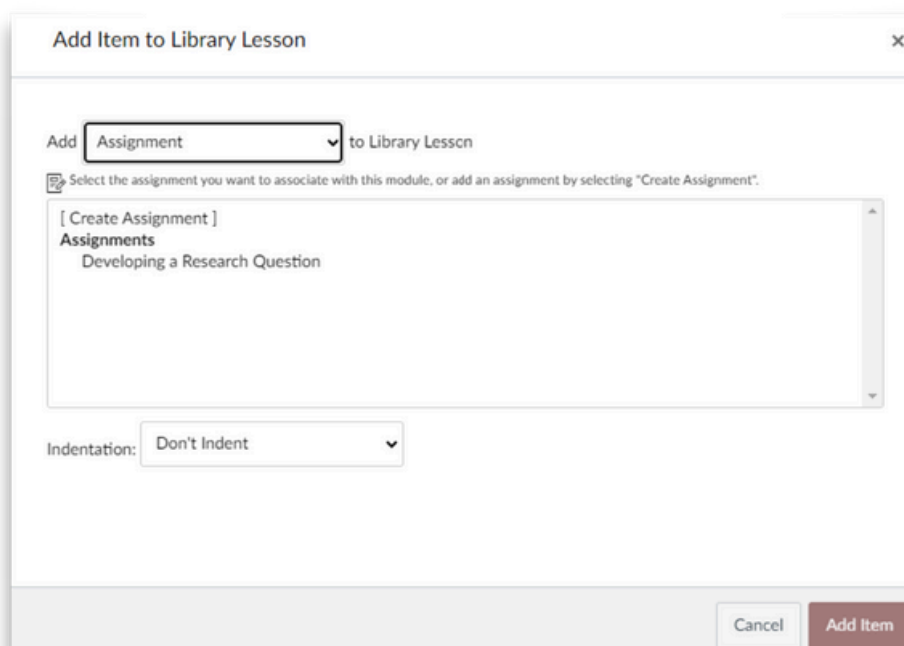

STEP 2: Next select "SCORM" from the menu and upload the Library Lesson Zip File. Choose from the assignment options (graded or ungraded).

STEP 3: If you imported the file as a graded assignment, you will find it in your assignments list. You can edit it with the appropriate due date and point value. Save and publish to finish.

STEP 4: Now the assignment is ready to be added to a module in Canvas for students to access.

If you have additional questions or need help embedding library resources, email the Online Learning Coordinator Librarian Pam Hill at pamhill@tamu.edu
